# NEWS RELEASE

## Announcing the 2009 LOGIX Greenbate For Homes

March 2009

LOGIX Insulated Concrete Forms Ltd. is pleased to announce the launch of the 2009 LOGIX Greenbate for Homes Program.

For years LOGIX has supported and encouraged the construction of healthy, sustainable and energy efficient buildings around the world. The 2009 LOGIX Greenbate program is another important plank in our platform of LOGIX support services and initiatives.

Under this new and exciting program, purchasers of LOGIX products will receive a direct "greenbate" of \$1.00 for every full height LOGIX block used in the construction of single family homes that receive an eligible environmentally friendly certification.

To qualify for the LOGIX Greenbate, the single family home must feature full height (footing to roof) LOGIX exterior walls. The first LOGIX shipment to the job site must be made in 2009 and the home must receive its certification by December 31, 2010. In addition, the home owner must allow LOGIX to use pictures of the home in its promotional materials, and must commit to provide LOGIX with the homes' energy consumption data for the first 24 months of use.

### **In the USA, the following environmentally friendly certifications are eligible for the LOGIX Greenbate:**

- Certified as a "LEED Home" under the LEED For Homes program as administered by the US Green Building Council.
- National Green Building Certification, as administered by the NAHB.
- The Builders Challenge (score of 70 or lower) on the EnergySmart Home Scale, as administered by the U.S. Department of Energy

### **In Canada, the following environmentally friendly certifications are eligible for the LOGIX Greenbate:**

- Certified as a "LEED Home" under the LEED Canada For Homes program as administered by the Canadian Green Building Council.
- R2000 Program, as administered by the Canadian Home Builders Association
- Envirohome Initiative, as administered by the Canadian Home Builders Association

To receive the LOGIX Greenbate, the purchaser of the LOGIX products must simply send a copy of the eligible certification, together with proof of purchase of the LOGIX products, to our LOGIX head office by February 28, 2010. A check will be issued to the purchaser in the amount equal to \$1.00 for every full height LOGIX block (or equivalent) used in the eligible project.

LOGIX is the leading ICF in North America. By providing a wall system that is more energy efficient, stronger, more sound resistant and more environmentally sustainable than virtually any other construction method, LOGIX Insulated Concrete Forms make it easy to build green.
